Azure Virtual Network (VNet) is the fundamental building block for your private network in Azure. VNet enables many types of Azure resources, such as Azure Virtual Machines (VM), to securely communicate with each other, the internet, and on-premises networks. VNet is similar to a traditional network that you'd operate in your own data center, but brings with it additional benefits of Azure's infrastructure such as scale, availability, and isolation.

Create virtual network

Basics | Security | IP addresses | Tags | Review + create

Enhance the security of your virtual network with these additional paid security services. Learn more

Virtual network encryption

Enable Virtual network encryption to encrypt traffic traveling within the virtual network. Virtual machines must have accelerated networking enabled. Traffic to public IP addresses is not encrypted. Learn more.

Virtual network encryption

Azure Bastion

Azure Bastion is a paid service that provides secure RDP/SSH connectivity to your virtual machines over TLS. When you connect via Azure Bastion, your virtual machines do not need a public IP address. Learn more.

Enable Azure Bastion

Azure Bastion host name: bastion

Azure Bastion public IP address *: (New) public-ip-bastion

Create a public IP address

Azure Firewall

Azure Firewall is a managed cloud-based network security service that protects your Azure Virtual Network resources. Learn more.

Enable Azure Firewall

Azure DDoS Network Protection

Azure DDoS Network Protection is a paid service that offers enhanced DDoS mitigation capabilities via adaptive tuning, attack notification, and telemetry to protect against the impacts of a DDoS attack for all protected resources within this virtual network. Learn more.

Enable Azure DDoS Network Protection

Create virtual network

Basics | Security | IP addresses | Tags | Review + create

Configure your virtual network address space with the IPv4 and IPv6 addresses and s

Define the address space of your virtual network with one or more IPv4 or IPv6 addre virtual network address space into smaller ranges for use by your applications. When assigns the resource an IP address from the subnet. Learn more

Add IPv4 address space

10.0.0.0/16

10.0.0.0 | /16

10.0.0.0 - 10.0.255.255 | 65,536 addresses

+ Add a subnet

Subnets	IP address range	Size
default	10.0.0.0 - 10.0.0.255	/24 (256 addre
AzureBastionSubnet	10.0.1.0 - 10.0.1.63	/26 (64 addresse

virtual networks, change address space '10.0.0.0/16 (10.0.0.0 - 10.0.255.255)'. Learn

A NAT gateway is recommended for outbound internet access from subnets. Edit th gateway. Learn more

Previous | Next | Review + create

Edit subnet

Subnet purpose: Default

Name *: subnet-1

IPv4

Include an IPv4 address space

IPv4 address range *: 10.0.0.0/16

10.0.0.0 - 10.0.255.255

Starting address *: 10.0.0.0

Size: /24 (256 addresses)

Subnet address range: 10.0.0.0 - 10.0.0.255

IPv6

Include an IPv6 address space: This virtual network has no IPv6 address ranges.

Private subnet PREVIEW

Private subnets enhance security by not providing default outbound access. To enable outbound connectivity for virtual machines to access the internet, it is necessary to explicitly grant outbound access. A NAT gateway is the recommended way to provide outbound connectivity for virtual machines in the subnet. Learn more

Enable private subnet (no default outbound access)

This setting can't be changed after the subnet is created

Security

Simplify internet access for virtual machines by using a network address translation gateway. Filter subnet traffic using a network security group. Learn more

NAT gateway: None — Create new

Network security group: None — Create new
